

Activity 6:

15th October 2019

Team: Anurag Bejjuri and Denise Chen

Hypothesis: The quantity of symbols used doesn't always give a clear scope of the value indicated by each symbol

Example:

Things we can do to improve the usage of symbols to in order to provide a clear scope of the value

- We can represent quantities using symbol by light shade to dark shade colors
- We could use a single symbol and increase the size to represent quantity
- We could assign each symbol to a class range of quantity
- We could use density of symbols to identify more concentrated locations on a map
- We could use logos to categorize different quantities
