

CMPT 767 – Visualization – Week 7 Journal – IEEE Data Viz Meet

Date: 22nd October 2019

Name: Anurag Bejju (301369375)

Theme: This week I wanted to log all the cool visualizations I have seen at the IEEE data Visualization meetup held at BrainStation.

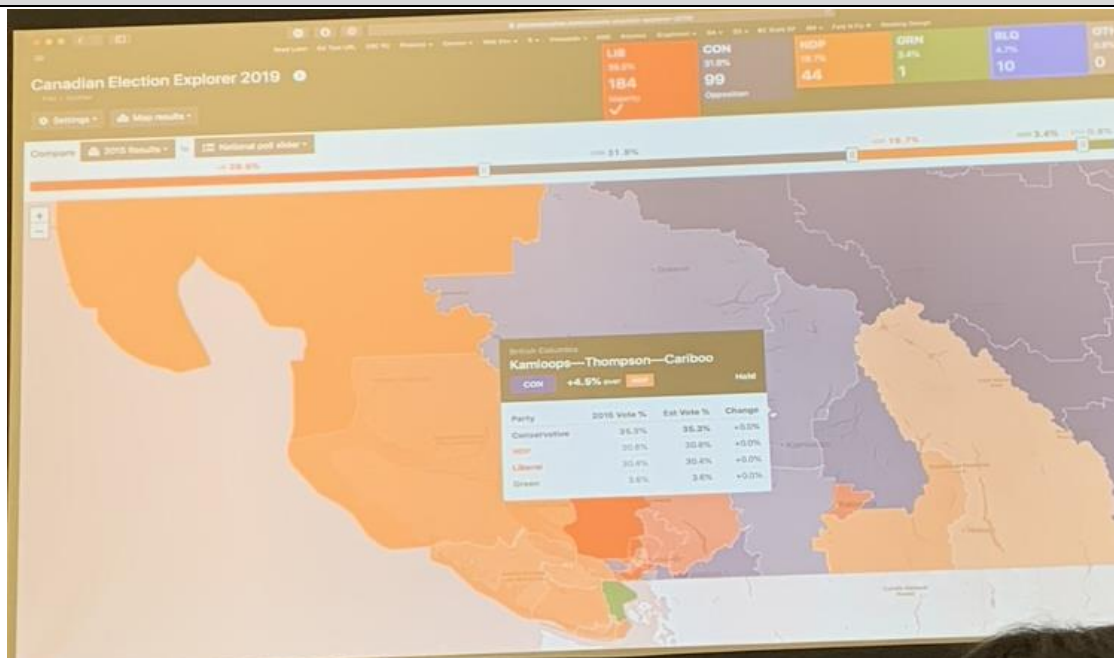

Visualization 1

Opinion

This was the election week. CBC has created this really cool live election results tracker which was updated every 20 seconds.

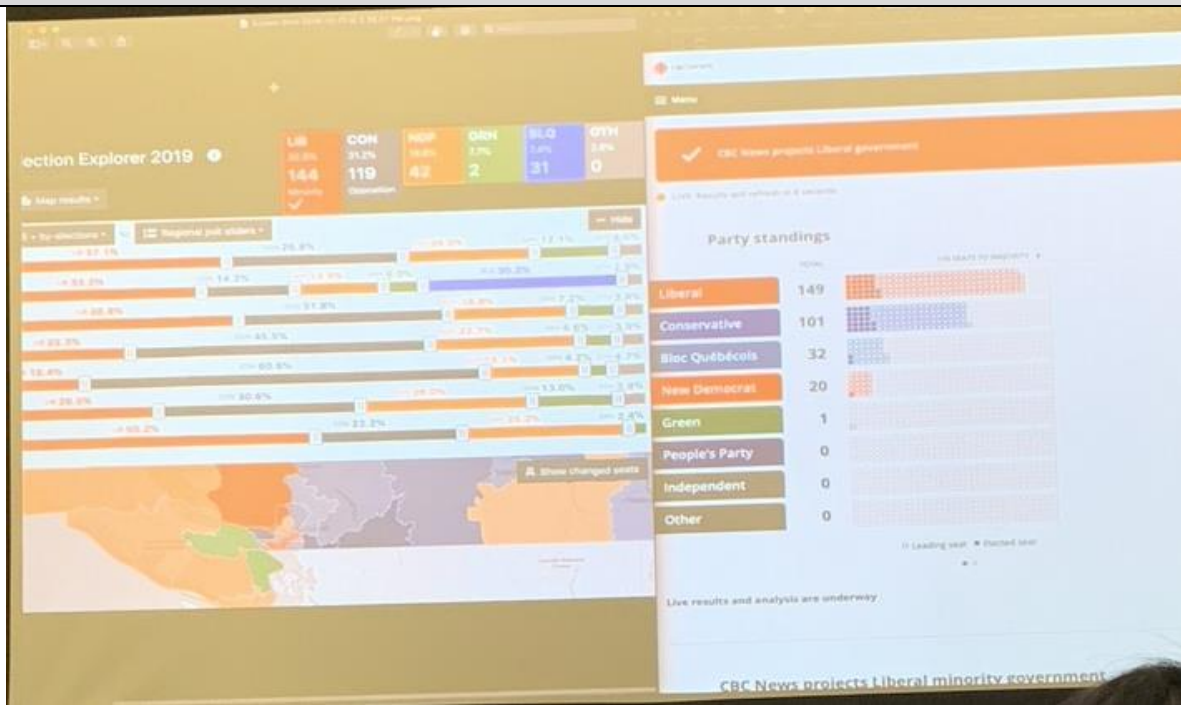

Visualization 2

Opinion

This election explorer was done by a speaker in the meetup. It used poll data from multiple sources to show election predictions.

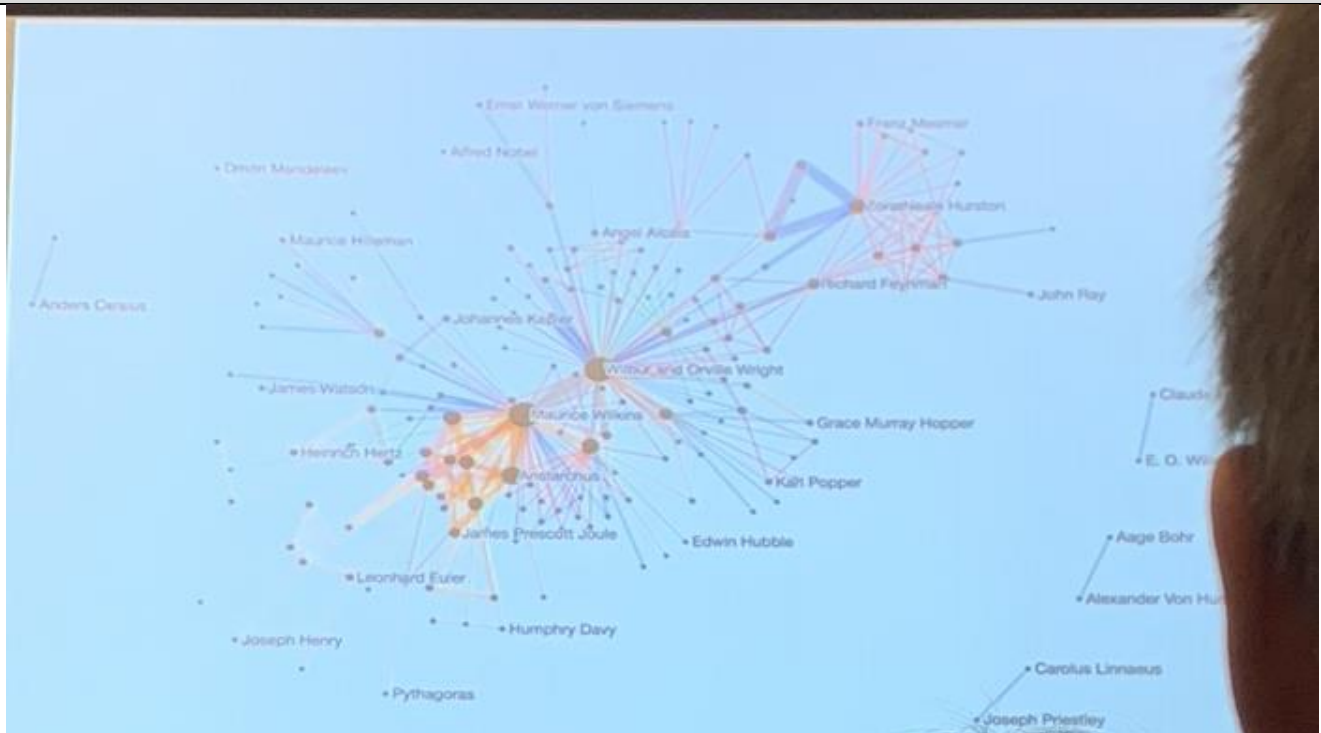

Visualization 3

Opinion

The same visualization also lets us use province level polls to adjust predictions. It was pretty accurate to the actual one.

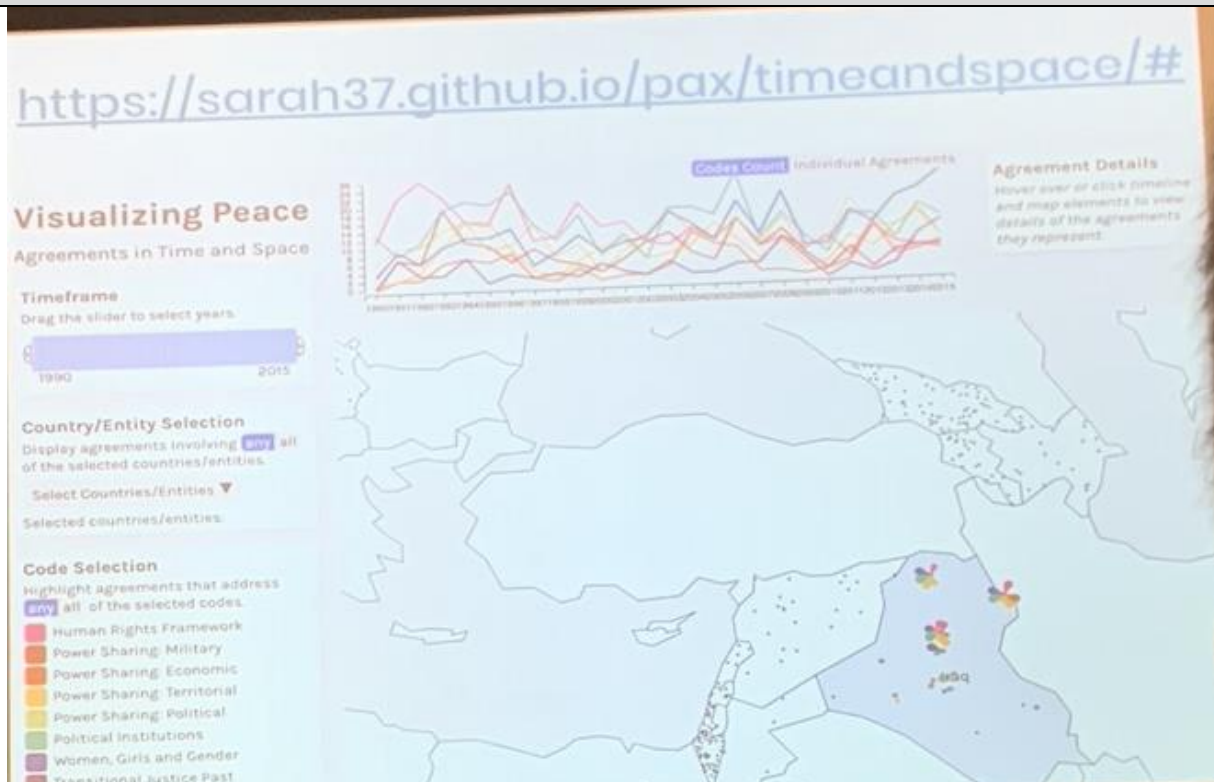

Visualization 4

Opinion

This viz was done by another speaker. It showed a graph viz to display human connections.

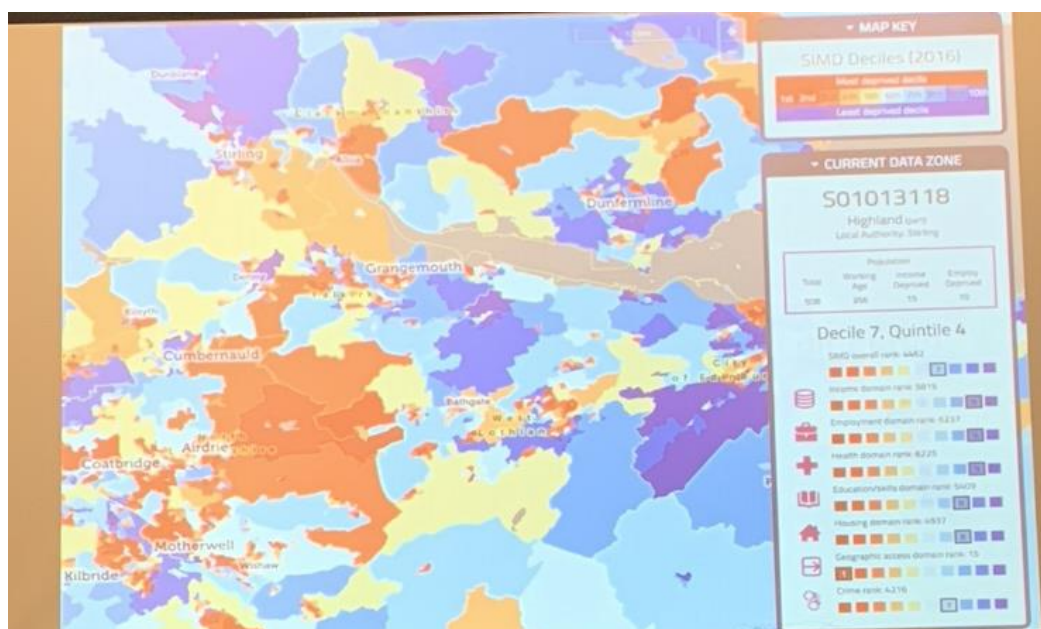

Visualization 5

Opinion

This was a super cool map visualization that shows peace agreements per country wrt to time and space.

Visualization 6

Opinion

This visualized SIMD data based on social indicators.

Visualization 7

Opinion

This was my favorite. It was a way to create abstract visualization for comics
