

CMPT 767 – Visualization Week 11 Journal – D3 Visualization

Date: 19th November 2019

Name: Anurag Bejju (301369375)

Visualization 1

Opinion

I like how you can represent same data in two very effective methods

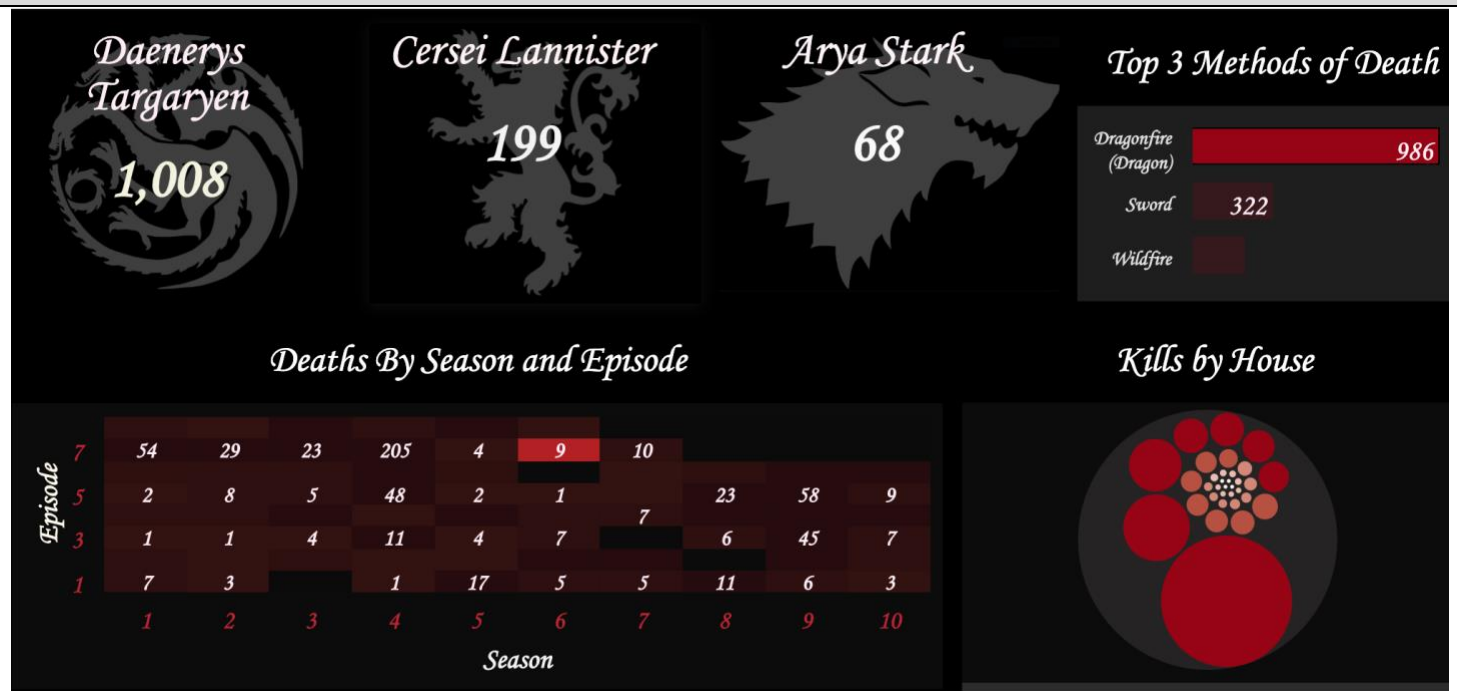

Visualization 2

Opinion

This was a cool visualization showing seasonal preference by age group

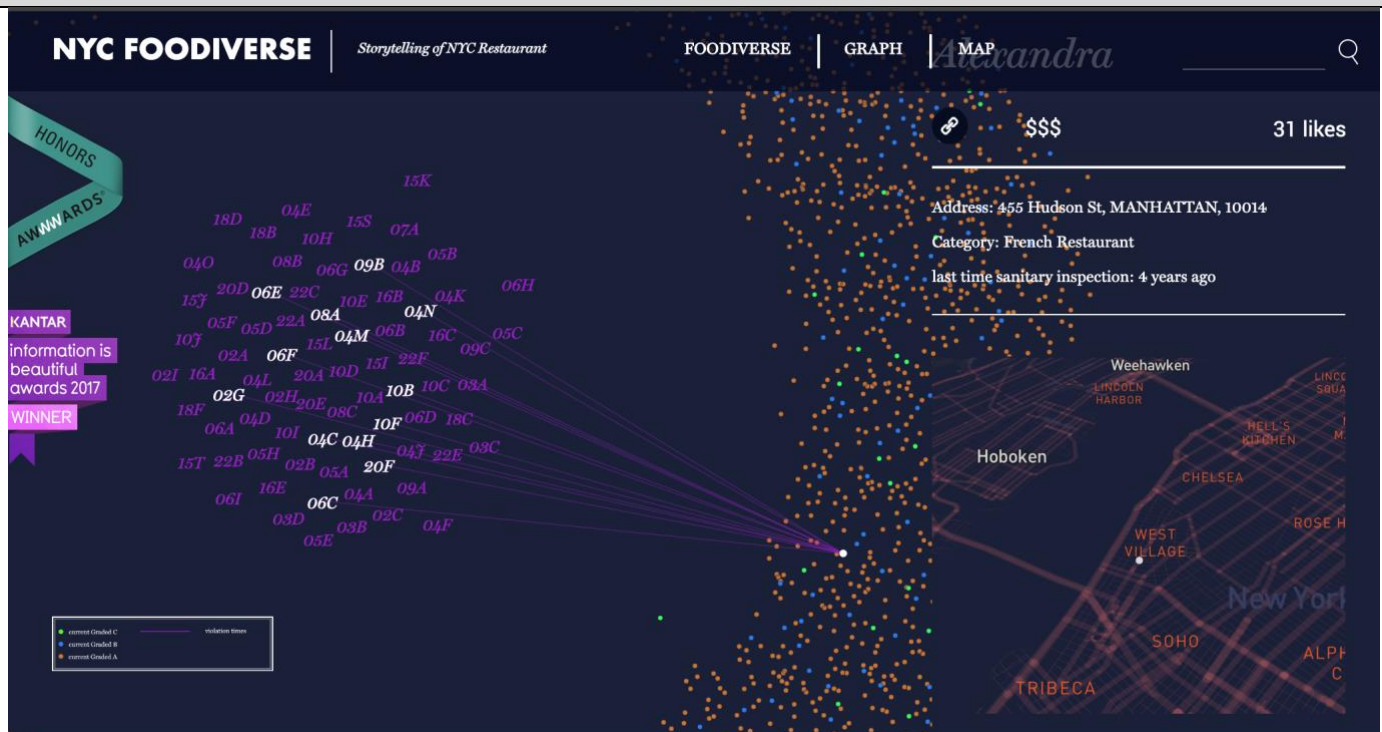

Visualization 3

Opinion

This visualization was really good at summarizing the very complicated Game of Thrones Data

Visualization 4

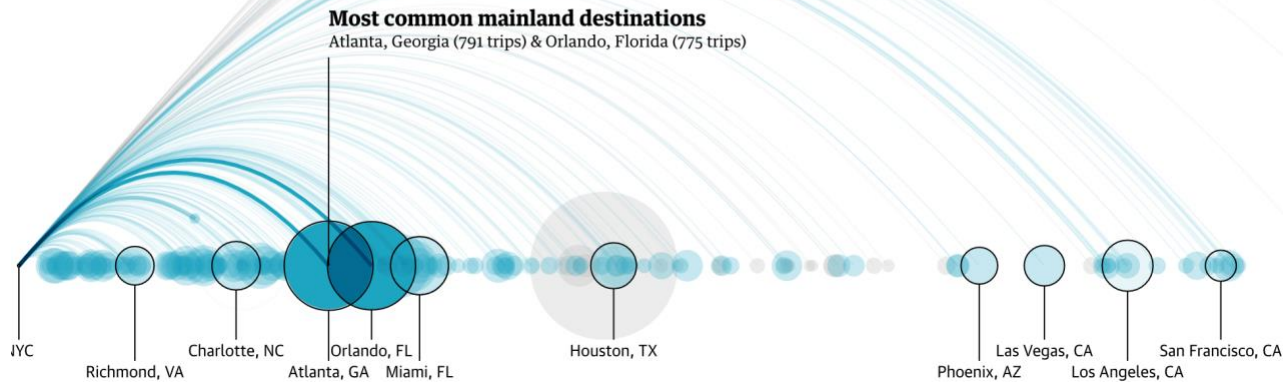

Opinion

The animation done inside this visualization is extraordinary

Visualization 5

Homeless relocations from New York City

The most popular US mainland destinations were two cities in the South:
Orlando, Florida, and Atlanta, Georgia.

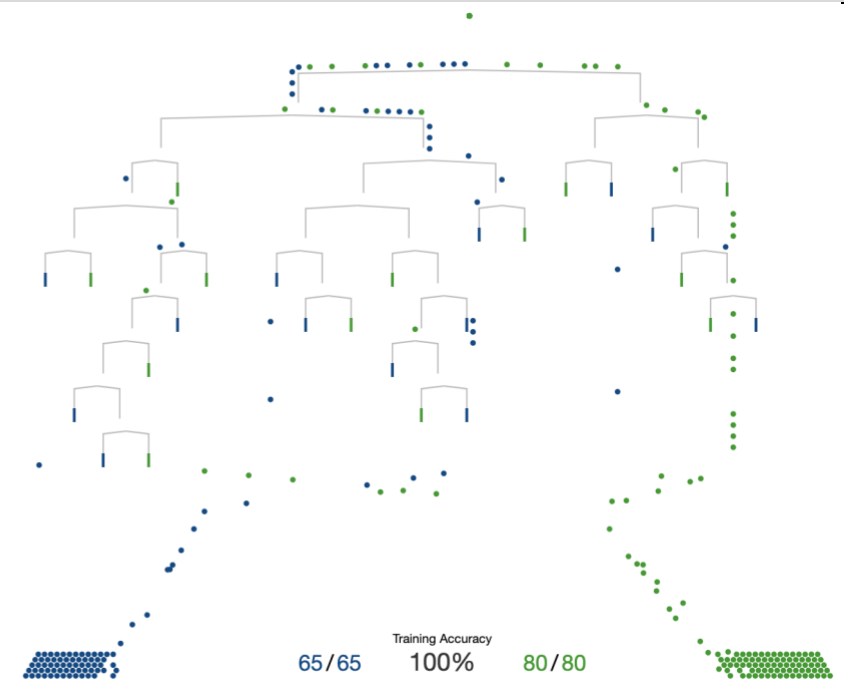

Opinion

This does a great job at showing the relocation trajectory from NYC

Visualization 6

Here you can see the data that was used to train the tree flow through the tree.

This data is called **training data** because it was used to train the model.

Opinion

The animation inside this viz was really good

Visualization 7

Overly complex

Additional splits allow the tree to take into account more complexity. You can add splits until a tree's leaf nodes contain only homes in either San Francisco or New York.

Opinion

The designer came up with a unique way to explain ML algorithm using this viz
