

CMPT 767 – Visualization – Dataset Approval

Date: 10th September 2019

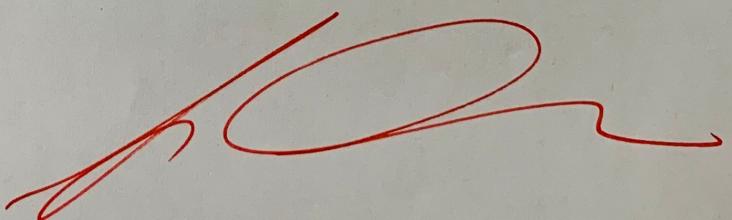

Team Members: Anurag Beiju (301369375), Denise Chen (301375388)

Data Source: <http://archive.ipu.org/wmn-e/classif-arc.htm> (Open Source)

Data Content: Collected historical data (monthly - from 1997) for 193 countries containing the percentage of women in the lower or upper house of parliament.

Access to Data: We have written a web scrapping script to extract the monthly data from women's in national parliament website.

Vision: With Trudeau forming Canada's 1st gender-balanced cabinet, we wanted to see and visualize how different countries have become more inclusive of women in their respective legislative branches over the last 3 decades. We also wanted to create an interactive platform that would showcase the correlation of having more women in power with improved socio and economic parameters (~ broadly speaking).
