The student

The student is not originally from this city, but he has come here to study. Every year, he moves out of his apartment for the summer break, and goes back home to where his parents live. There, he spends very little money on groceries, and a lot on recreation. At the beginning of the Fall term, he moves back to school, finds a new apartment, and pays a new deposit. He also needs to pay for his transport card, which will be sufficient for all commuting during the year. He starts buying groceries again, and spends less on recreation. Finally, he spends quite a lot of time going out, and spends a relatively large amount of his money there.

Questionnaire

1. a) Did you notice the drop in recreational expenses after the beginning of the Fall term in September?
Yes No

1. b) Do you show this in your visualization?
Yes No

We can see the decrease in the trend in that particular subset of the graph.

3. a) Did you notice the increase in grocery expenses and its stabilization after the beginning of the Fall term in September?
Yes No

3. b) Do you show this in your visualization?
Yes No

We can see the stabilization as well as the increase in the beginning in that particular subset of the graph.

2. a) Did you notice the relatively high expenses for bars and restaurant?
Yes No

2. b) Do you show this in your visualization?
Yes No

Without housing in consideration, it is relatively high than other expenses.

4. a) Did you notice the high transport expenses at the beginning of the Fall term in September?
Yes No

4. b) Do you show this in your visualization?
Yes No
You can see the drastic increase (red) in the month of September.

5. a) Did you notice the big bounce in housing expenses at the beginning of the Fall term in September, and its later decrease and stabilization?
Yes No

5. b) Do you show this in your visualization?
Yes No

That is the highest peak in the entire graph.
